Indal Awalaikal

Software Engineer | Backend-Focused Full-Stack Development |
Golang • React • MySQL
Makassar, Sulawesi Selatan, Indonesia

Ringkasan

Backend-focused Software Engineer with a passion for building scalable, efficient, and maintainable software solutions. Experienced in designing RESTful APIs, developing backend services with Golang, and building full-stack web applications using React, Next.js, and MySQL. I enjoy solving complex engineering problems, optimizing application performance, and writing clean, maintainable code. As a Full Stack Engineer at COCONUT Computer Club, I have contributed to collaborative software projects involving backend architecture, application development, and system integration while continuously improving my technical and teamwork skills. I am passionate about backend engineering, software architecture, distributed systems, and continuous learning. My goal is to build reliable software that creates meaningful impact and delivers long-term value. Tech Stack: Golang • Python • React • Next.js • Flask • MySQL • Docker • Git • Linux • RESTful APIs • FastAPI

Pengalaman

COCONUT Computer Club

Learning Department Coordinator & Full-Stack Engineer
September 2025 - Present (11 bulan)

Makacap

As the Learning Department Coordinator at COCONUT Computer Club, I lead the planning and execution of technical learning programs that help members strengthen their knowledge and practical skills in software engineering and modern technologies. My responsibilities include organizing technical workshops, developing learning materials, coordinating mentoring, facilitating knowledge-sharing sessions, and collaborating with other departments to foster a culture of continuous learning and technical excellence.

Alongside my leadership role, I actively contribute to internal and external software development projects with a primary focus on Backend Engineering while also participating in full-stack application development and Python-based AI integration.

Key Responsibilities

- Design, develop, and maintain scalable backend services and RESTful APIs using Golang, emphasizing clean architecture, modular design, and maintainable code.
- Develop modern full-stack web applications using React, Next.js, MySQL, and modern web technologies.
- Design, optimize, and manage relational databases, ensuring efficient queries, data integrity, and application performance.
- Integrate frontend applications with backend services through secure RESTful APIs.
- Develop and integrate Python-based AI features, including recommendation systems and LLMs.
- Implement authentication, authorization, input validation, logging, and error handling to improve application security and reliability.
- Apply Clean Architecture, reusable components, modular architectures, and software engineering best practices.
- Containerize applications using Docker and contribute to CI/CD workflows with GitHub Actions.
- Collaborate throughout the SDLC, from system design and implementation to testing, deployment, and maintenance.
- Integrate third-party services and external APIs.
- Optimize application performance, scalability, reliability, and maintainability through debugging, refactoring, and optimization.

idsecconf

Public Relations Committee

November 2025 - Present (9 bulan)

Makacap

Served as a member of the Public Relations Committee for IDSECONF 2025, an information technology conference held in Makassar that brought together students, academics, professionals, and technology enthusiasts.

Key Responsibilities

- Built and maintained relationships with potential sponsors and strategic partners to support the success of the event.
- Conducted outreach to schools, universities, and communities to increase participant engagement and event awareness.
- Promoted the conference through digital platforms and direct communication with prospective participants.
- Collaborated with the organizing committee to develop promotional strategies and maximize event visibility.

- Assisted in coordinating communication between sponsors, partners, participants, and the organizing committee.
- Contributed to participant acquisition and partnership initiatives to support the successful execution of the conference.

PT Algoland Global Digital
 Research And Development Intern
 Desember 2025 - Februari 2026 (3 bulan)
 Makassar, Sulawesi Selatan, Indonesia

As a Research and Development Intern at PT Algoland Global Digital, I was involved in the research, development, and implementation of IoT-based systems and robotic prototypes. My responsibilities focused on hardware integration, embedded system development, and collaborative technical research.

- Designed and assembled robotic and IoT-based prototypes using Arduino, ESP32, and various electronic components
- Conducted research and experimentation for hardware functionality, sensor integration, and system optimization
- Developed and tested embedded system features for automation and real-time device communication
- Collaborated with team members in project development, troubleshooting, and technical discussions
- Assisted in prototype evaluation, system improvement, and implementation of innovative solutions
- Improved understanding of IoT architecture, microcontroller programming, hardware debugging, and teamwork in technology-driven environments

Through this internship, I gained hands-on experience in IoT development, robotics prototyping, technical problem-solving, and collaborative research workflows.

Pendidikan

Universitas Negeri Makassar
 Bachelor of Engineering, Informatics · (Agustus 2023 - Juni 2027)
