PROFESSIONAL SUMMARY

Backend-focused Software Engineer specializing in Golang, RESTful APIs, and scalable backend architecture. Experienced in developing full-stack web applications using React, Next.js, MySQL, and Docker. Passionate about designing maintainable software systems, clean architecture, and AI-powered backend solutions.

TECHNICAL SKILLS

Languages: Go • Python • JavaScript

Frontend: React • Next.js • Vite.js • Tanstack

Backend: Golang • Flask • FastAPI

Database: MySQL • PostgreSQL • Redis

Tools & Practices: Docker • Git • Linux • CI/CD (GitHub Actions) • Clean Architecture • REST API Design

AI/LLM: OpenAI API • Claude API • Gemini API • Groq API • Ollama • Prompt Engineering

KEY ACHIEVEMENTS

- Selected as Learning Department Coordinator at COCONUT Computer Club, leading technical learning programs for the organization.
- Delivered two production-ready full-stack applications (AgroAdvisor & Lakoo), developing scalable backend APIs, AI integrations, and modern web interfaces.
- Authored a published conference paper on educator competence and innovation, and earned Software Engineering & Go certifications from TestDome.

PROFESSIONAL EXPERIENCE

Learning Department Coordinator & Full-Stack Engineer — **COCONUT Computer Club** Sep 2025 – Present (11 months) | Makassar, Indonesia

- Lead planning and execution of technical learning programs — workshops, learning materials, and mentoring coordination — to strengthen members' software engineering skills.
- Design, develop, and maintain scalable backend services and RESTful APIs in Golang using Clean Architecture; build full-stack web apps with React, Next.js, and MySQL.
- Develop Python-based AI features (recommendation systems, LLM integration) and implement authentication, validation, logging, and error handling for security and reliability.
- Containerize applications with Docker, contribute to CI/CD via GitHub Actions, and integrate third-party services across the full SDLC.

Research and Development Intern — **PT Algodand Global Digital** Dec 2025 – Feb 2026 (3 months) | Makassar, South Sulawesi, Indonesia

- Designed and assembled robotic and IoT-based prototypes using Arduino, ESP32, and other components, including embedded features for automation and real-time device communication.
- Conducted hardware/sensor research and collaborated on prototype evaluation, troubleshooting, and system improvement.

Public Relations Committee — **idseconf** Nov 2025 (completed) | Makassar, Indonesia

- Served on the Public Relations Committee for IDSECONF 2025, an IT conference in Makassar — built sponsor/partner relationships and promoted the event to schools, universities, and communities.

FEATURED PROJECTS

AgroAdvisor — Full-Stack Developer & AI Engineer

Tech Stack: Next.js • Golang • MySQL • Python • Docker • Gemini/Groq/Ollama APIs

Contribution: Built responsive frontend, backend RESTful APIs, and an AI recommendation service integrating LLMs with IoT device communication.

Impact: Automated crop recommendation and irrigation workflows for farmers.

Lakoo — Full-Stack Developer

Tech Stack: Vite.js • Golang • Python • Docker • Railway • Vercel

Contribution: Built frontend interfaces, scalable backend/RESTful APIs, and AI-powered recommendation features; managed containerized deployment.

Impact: Enabled small and medium-sized businesses (UMKM) to digitize and optimize business operations.

EDUCATION

Bachelor of Engineering, Informatics — Universitas Negeri Makassar | Aug 2023 – Jun 2027 | GPA: 3.91

CERTIFICATIONS

- TestDome** (Jul 2026): Software Engineering ([verify](#)); Go Programming Language ([verify](#))
- Alison** (Jul 2026): Scalable Python Web Dev (Flask) ([verify](#)); NGINX/PHP/MySQL/SSL Setup ([verify](#)); MySQL for Beginners ([verify](#))
- MySkill Academy** (Apr 2024): Frontend Development (Advanced)
